Diagrams

Getting Started

1. Rotate the Purification Dial all the way to the left in order to start in the OFF position.
2. Plug the unit into a wall outlet and rotate the Purification Dial to the right until the unit turns on.
NOTE: This is the minimum setting for purification output.
3. Set the desired strength of the unit by turning the Purification Dial slowly to the right. A good starting point is to set the unit just at the point you detect a “clean odor” with your nose.

Cleaning

NOTE: For proper operation, the unit should be cleaned at least once per month.

1. Turn the unit OFF and remove it from the wall outlet.
2. Vacuum out the Fan Air Intake until clean.

NOTE: Blowing air directly into the Fan Air Intake to clean the unit is not advised. This will cause a restriction in future air flow and may diminish the quality of air being emitted from your unit.

3. Dip a cotton swab (Q-Tip) in Isopropyl Alcohol and insert it into the Purification Output Nozzle. Gently rotate the swab and clean the entire area until all visible debris has been removed. Use a new cotton swab to dry the previously cleaned area.
4. Allow the unit to dry, face down.
5. Plug your unit back into the outlet and turn the dial to the maximum purification output. Verify that the green light is on, and there is a clean smell emitting from your unit. Once a clean smell emits, you may reduce the dial to your desired purification output level.
