

Was the Whole Pandemic About the Vaccine?

Analysis by [Dr. Joseph Mercola](#) ✓ Fact Checked

STORY AT-A-GLANCE

- › Could it be that the whole COVID-19 pandemic was about the vaccine and getting a global mass vaccination campaign underway for population control purposes?
- › Recent weeks have seen a significant rise in vaccination incentives in the U.S., from free doughnuts, cake, french fries, hot dogs and pizza, to arcade tokens, 10-cent beer, free state park season passes, free Uber and Lyft rides, free marijuana and Cincinnati Reds baseball tickets, a chance to win a full scholarship and even \$1 million and \$5 million giveaways
- › Meanwhile, the U.S. Vaccine Adverse Events Reporting System has logged more deaths following COVID-19 vaccination than all available vaccines combined over a 15.5-year period
- › Former COVID-19 patients are even pushed to get the jab, even though they already have superior immunity and studies show they have a far higher risk of severe side effects from the vaccine, and North Carolina has passed legislation that allows children as young as 12 to get the COVID vaccine without parental consent
- › COVID-19 vaccines might perform as a “depopulation weapon” by triggering antibody-dependent immune enhancement, making you more susceptible to severe COVID-19 if exposed to the virus. Antibodies against the spike proteins may also attack syncytin-homologous proteins essential for the formation of placenta, which could result in infertility. Overall, the shots may destroy your innate immunity and set you up for rapid onset of debilitating illness and premature death

In my opinion Dr. Peter McCullough is one of the most courageous well credentialed academic physicians out there and I hope to interview him soon. He is vice chief of internal medicine at Baylor University Medical Center and despite his impeccable credentials, he has been vilified for stating during the very beginning of the COVID-19 pandemic, that it was all about the vaccine and getting a global mass vaccination campaign underway.

"All roads lead to the vaccine," McCullough said in a recent interview (video above^{1,2}), with stakeholders banking on countries mandating the vaccine worldwide. The first video above is a 16-minute outtake from a much longer interview, which is the second video.³

McCullough points out that a number of countries are already talking about making the as-yet unlicensed COVID-19 vaccine compulsory, meaning anyone and everyone can be forced to take it against their will. "That's how bad stakeholders want vaccination," McCullough says. "They do want a needle in every arm. But why?" That's the million-dollar question right there.

Unbelievable Incentives Offered

Recent weeks have seen a significant rise in all sorts of vaccination incentives in the U.S., from free doughnuts, cake,⁴ french fries, hot dogs and pizza,⁵ to arcade tokens,⁶ 10-cent beer,⁷ free state park season passes,⁸ free Uber and Lyft rides,⁹ free marijuana¹⁰ and Cincinnati Reds baseball tickets,¹¹ a chance to win a full scholarship¹² and even \$1 million¹³ and \$5 million¹⁴ giveaways.

Below is a more complete list of incentives, posted on vaccines.gov.¹⁵ As you might expect, the million-dollar lotteries have proven to be a resounding success, credited with enticing millions of people to get their shots.¹⁶

As noted by Ohio's first "Vax-a-Million" lottery winner," the chance of a windfall was too great to resist. "I kept hemming and hawing about it, and I work all the time, and when the Vax-a-Million thing started I immediately went down there and got it. It pushed me over the edge," he told a local paper.¹⁷

To say the vaccine push has an air of desperation about it would be a profoundly serious understatement.

Considering the U.S. Vaccine Adverse Events Reporting System (VAERS) has logged more deaths following COVID-19 vaccination than all available vaccines combined from mid-1997 until the end of 2013¹⁸ — a period of 15 1/2 years — one has to wonder why our leaders are so insistent on everyone getting these experimental gene therapies.

They're even pushing for former COVID-19 patients to get the jab, even though they already have superior permanent immunity¹⁹ and studies show they have a far higher risk of severe **side effects** from the COVID jab.²⁰

If it's really about protecting the public against COVID-19, why aren't recovered COVID patients — whose protection is far superior to vaccine-induced immunity — offered some sort of immunity passport or granted access to sporting events or education that is now only granted to those with vaccine certificates?

What's more, North Carolina has now passed legislation that allows children as young as 12 to get the COVID vaccine without parental consent.²¹ Think about that. As of May 21, 2021, 4,406 Americans had died after the COVID vaccine,²² including three teenagers,^{23,24,25,26} and 12-year-olds are now being encouraged to make a life and death decision without their parents?

As noted by McCullough, historically, the threshold at which an experimental vaccine program is shut down is 25 to 50 deaths, yet here we are, with over 4,000 deaths being reported in the U.S. and many thousands more in Europe.^{27,28}

In a recent report, the Israeli People Committee, a civilian body of health experts, similarly concluded that "there has never been a vaccine that has harmed as many people."²⁹

After vaccinating 45 million with the pandemic swine flu vaccine in 1976, the U.S. stopped the program after only 25 deaths.³⁰ (The number of deaths reported after the 1976 inoculation program varies from three to 53, depending on the source.^{31,32,33,34}) And

let's remember this too: If something goes wrong, the vaccine manufacturers are completely indemnified against lawsuits. You're on your own.

Mass Vaccination Is a Beyond Terrible Strategy

As a physician, McCullough is no longer recommending this vaccine, and other prominent virologists and physicians are calling for a stop to the program. Sadly, many are complying simply because they're desperate to get back to the "normal" they knew before, of sending their children to school, keeping their job and leading the life they had before the pandemic.

Don't do it, McCullough says – don't fall for this trap because it's only going to make things worse. By **vaccinating everyone** against a very narrow spectrum of immunity – the original SARS-CoV-2 spike protein, which has since mutated in any number of ways and no longer exists – "we are setting ourselves up for a superbug that's going to wipe out populations," he says.

As such, the COVID-19 vaccine is a bioweapon, McCullough warns, and the side effect concerns are "far beyond anything we have ever seen ... Americans should be extraordinarily alarmed."

What's This Vaccine Program Really About?

Why is the vaccine pushed in this way? McCollough believes it's a global goal to "mark" people, to get you into their vaccine database, which will eventually be turned into a tool for population control, courtesy of vaccine passports.

When we're talking about population control, there are two distinct forms, and both may apply in this case. One form of population control is about controlling people through the ideology of utilitarianism, vaccine passports and a social credit system, all of which are tied together. Another form is actual depopulation.

Population Control Through Utilitarianism and Vaccination

Utilitarianism is based on a mathematical equation that some individuals can be sacrificed for the greater good of the majority. In other words, if some people are harmed by vaccines, it's an acceptable loss because society as a whole may or will reap gains.

This discredited pseudo-ethic has repeatedly been used to justify horrific human rights abuses. The Third Reich, for example, employed the utilitarian rationale as an excuse to demonize and eliminate minorities judged to be a threat to the health, security and well-being of the State.³⁵ Now, utilitarianism is being called upon yet again, under the false narrative that mankind as a whole is in peril unless everyone rolls the dice and gets vaccinated.

In the end, the idea is that vaccine refusers won't be allowed to freely participate in society any longer. This is the disincentive or negative incentive, which is added on top of the positive incentives previously mentioned.

While U.S. government officials realize they cannot mandate vaccination on a national level, as it would be a direct violation of the U.S. Constitution, they are pushing for it nonetheless by encouraging private companies to mandate vaccination as a condition of employment or access to services. They're also spending billions of dollars on advertising in conventional media, paid for by U.S. taxpayers.

In short, vaccine passports are a way to force compliance. But the vaccine database can also form the foundation for a much larger control structure, a social credit system, where you lose points any time you behave in a way that is deemed undesirable.

This quite literally could be anything, judging by the Chinese social credit system. People with low social credit scores can't travel on certain kinds of public transportation, can't travel overseas, hold certain jobs, go to school or even get a loan.

The point is, once you're in this system, you're under someone else's control. If they say you have to get a booster shot, you have to comply — again and again — or risk losing basic human rights, such as the ability to buy and sell, travel or get an education.

The Depopulation Agenda

The other form of population control refers to actual depopulation. A primary problem the global elite have been trying to solve for a long time is that there are too many people consuming too much of the world's perceived limited resources and polluting everything in the process. The answer, in their mind, is to reduce the global population.

While birth control and abortions are promoted to help with this, these strategies aren't effective, or rapid, enough. They need a less fertile population and they need people to die sooner.

“ I believe [COVID-19 booster shots] are going to be used to damage your health and possibly kill you. I can see no sensible interpretation other than a serious attempt at mass depopulation. ~ Michael Yeadon Ph.D.”

While many may not want to believe this could possibly be true, you have to remember that the intention is not to cause suffering per se. It's a form of self-preservation, as their end goal is to concentrate all the world's wealth into their own hands. Ultimately, that's [what the Great Reset is all about](#).

In the interview above, which is part of the full-length documentary "Planet Lockdown,"³⁶ Michael Yeadon, Ph.D., a life science researcher and former vice-president and chief scientist of allergy and respiratory research at [Pfizer](#), shares his views on the COVID-19 pandemic and his fears about the COVID-19 vaccines.

"Basically, everything your government has told you about this virus, everything you need to do to stay safe, is a lie," Yeadon says. "And if they're not telling the truth, that means there's something else. And I'm here to tell you that there is something very, very bad happening. If you don't pay attention, you will soon lose any chance to do anything about it."

Will Booster Shots Be the Death Knell?

Of all the lies we've been told over the past year, the ones that worry and frighten Yeadon the most are the lies about virus variants and booster shots. In fact, he believes not buying into these lies may be key to your very survival.

"When your government scientists tell you that a variant that's 0.3% different from SARS-CoV-2 could masquerade as a new virus and be a threat to your health, you should know, and I'm telling you, they are lying," Yeadon says.

"If they're lying – and they are – why is the pharmaceutical industry making top-up [booster] vaccines? ... There's absolutely no possible justification for their manufacture. And the world's medicines regulators have said, 'Because they are quite similar to the original vaccines ... we won't be asking them to do any clinical safety studies' ...

There's no possible benign interpretation of this. I believe they're going to be used to damage your health and possibly kill you. Seriously. I can see no sensible interpretation other than a serious attempt at mass depopulation.

This will provide the tools to do it, and plausible deniability. They'll create another story about some sort of biological threat and you'll line up and get your top-up vaccines [booster shots], and a few months or a year or so later, you'll die of some peculiar inexplicable syndrome. And they won't be able to associate it with the vaccines ...

Given that this virus represents, at worst, a slightly bigger risk to the old and ill than influenza, and a smaller risk [than influenza] to almost everyone else ... we didn't need to do anything. [We didn't need] lockdowns, masks, mass testing, vaccines.

There are multiple therapeutic drugs that are at least as effective as the vaccines are. They're already available and cheap ... An off-patent drug called ivermectin, one of the most widely-used drugs in the world, is able to reduce symptoms at any stage of the disease, including lethality by about 90%. So, you

don't need vaccines and you don't need any of the measures that have been introduced at all."

Why Have Effective Treatments Been Suppressed?

Like Yeadon, McCullough has raised serious questions about the need for a vaccine. Evidence clearly shows there are highly effective treatments,^{37,38} yet they've been near-universally suppressed in favor of these experimental shots. Why? If it's about protecting public health and saving lives, why would effective treatments be vilified?

As noted by McCullough during a roundtable discussion in the first of several U.S.-based tribunals on COVID-19,³⁹ something very unusual happened in 2020. For the first time, doctors around the world were actively discouraged and prevented from saving their patients. There was "an enormous, complete, pervasive, steadfast suppression of any attempts to help patients with COVID-19," he said, adding:

"We seem to somehow have developed a uniform game plan ... to passively allow as much suffering hospitalization and death as possible, create enormous amounts of fear in our society, and then be prepared for mass vaccination."

Disturbingly, there's evidence suggesting the COVID-19 vaccines might indeed perform as a "depopulation weapon" of sorts. For example, there's the potential for formation of non-neutralizing antibodies that can trigger an exaggerated immune reaction (referred to as paradoxical immune enhancement or antibody-dependent immune enhancement or ADE) when the individual is exposed to the wild virus post-vaccination.^{40,41,42}

I've detailed this issue in several articles, including "[How COVID-19 Vaccine Can Destroy Your Immune System](#)" and "[Will Vaccinated People Be More Vulnerable to Variants?](#)"

Put plainly, the vaccine may increase susceptibility to the virus and make people more likely to die from the infection, and data⁴³ now show COVID-19 deaths are spiking around the world right along with rising vaccination rates, even though countries were trending toward herd immunity and deaths were at an all-time low right before the vaccines were released.

The **mRNA vaccines** also trigger your body to produce antibodies against the SARS-CoV-2 spike protein, and the spike proteins in turn contain syncytin-homologous proteins that are essential for the formation of placenta.⁴⁴ If a woman's immune system starts reacting against syncytin-1, then there is the possibility she will miscarry if pregnant and ultimately become infertile.

Mass vaccinating children and women of childbearing age against COVID-19 is a profoundly bad idea that could cause mass infertility if the COVID jab triggers an immune reaction against syncytin-1.

We also now know that the worst symptoms of COVID-19 are created by the **SARS-CoV-2 spike protein**, and that is the very thing these gene-based vaccines are instructing your body to make. What's worse, the spike protein your body creates is a genetically modified version that appears far more toxic than the spike protein found in the actual virus.

This was discussed in great detail in my interview with Stephanie Seneff, Ph.D., and Judy Mikovits, Ph.D., featured in "**The Many Ways in Which COVID Vaccines May Harm Your Health.**"

Like McCullough and Yeadon, Mikovits believes the COVID-19 vaccine is a bioweapon designed to destroy your innate immunity and set you up for rapid onset of debilitating illness and premature death. She too suspects many will die rather rapidly. "It's not going to be 'live and suffer forever.' It's going to be suffer five years and die," she says.

While the death toll from COVID-19 vaccines is already at a historical level, I fear it may shoot far higher as we move through fall and winter. The reason for this is ADE.

Fall and winter are the seasons in which most coronavirus infections occur, be it SARS-CoV2 or other coronaviruses responsible for the common cold, and if ADE does turn out to be a common problem, then vaccinated individuals may in fact turn out to be at significantly higher risk of severe COVID-19 and a potentially lethal immune reaction due to pathogenic priming.

Will You Gamble Your Life?

In my view, there are still so many potential avenues of harm and so many uncertainties, I would encourage everyone to do your homework, keep reading and learning, weigh the potential pros and cons, ignore all pressure tactics and take your time when deciding whether to get any of these [COVID-19 gene therapies](#).

And, if you or someone you love has already received a COVID-19 vaccine and are experiencing side effects, be sure to report it, preferably to all three of these locations.⁴⁵ While adverse effects and deaths have thus far been ignored, we need as much data as possible if we're to have any chance of stopping this mass vaccination campaign and push toward population control.

1. If you live in the U.S., [file a report on VAERS](#)
