Humanity must recover the path of health with natural strategies with the control of the variables associated with lifestyle, that is, with the control of epigenetics. Vaccines, medicines, fluoridated water, sedentary life, junk food, pesticides, tobacco, EFM, etc., the lack of essential substances and an insufficient detoxifying function, cause mutations in our DNA and aberrant methylations, which favor degenerative diseases and cancer. Natural medicine is the way of health, it is possible to control the epigenome with lifestyle, with a healthy diet (nutrigenomica). Allopathic medicine the path of disease. The belief that allopathic drugs can heal is degenerating the human race.

Genes by themselves do not determine diseases, but the epigenetics that influences our lives, which determines the transformation of the mother cell into "malignant". By modifying the lifestyle, we can return to a situation of biochemical "normality". The current behavior of humanity, have nothing to do with our origins, modifying the biological laws that made life possible. We need air, water, sun and substances that our mother earth produces.

The so-called oncogenes with which cancer is associated, are formed from the proto-oncogenes of the genome that has physiological functions, but when by inflammation due to poor epigenetic control. The p53 proto-oncogene, is known as the guardian of the genome, because it can avoid the most frequent cancers and influences aging. P53 is a gene that is activated only in a situation of stress, when there is damage in a cell, preventing its proliferation or cell division. According to Dr. Mercola, unfortunately CRISPR editing technology is being used in agriculture. In the investigations with animals, numerous unwanted mutations were found. We enter into the terrifying possibility of creating "design babies", with a clear confrontation with ethical values. articles.mercola.com/sites/articles/archive/2017/06/13/crispr-gene-edition.

Maybe something has just been uncovered that they really intended anyway, and they are trying to pass it off as something unexpected that they cannot fix. Surely, DARPA supersoldiers now being created will not be intended to live too much past their useful lifespan, I don't think the state wants retired supersoldiers running around. The Chinese are rumoured to be actually creating such soldiers too. A bit like 'Blade Runner'.

Darzoum

My feeling about this is real simple: it's not wrong because it may not work, may cause cancer or whatever. All that is practically irrelevant. It's just wrong.

In order to function properly, tp53 must have a proper molecular chaperone such as hsp70, otherwise disastrous results could occur. Let's feed and educate what we have first, a oversized population for this planet.

Posted On 06/26/2018

Guillermou

Yes anounamongus. The molecular chaperones Hsp90 and Hsp70 maintain the native conformation of p53 in thermal shock conditions. Hsp70 molecular chaperones are required to support p53 tumor suppressor activity under stress conditions. www.ncbi.nlm.nih.gov/.../19749793

The proteins Hsp70, Hsp90 and p53 are overexpressed in breast cancer, and associate with each other in 66.6% of the samples analyzed. Expression and Association of Hsp70, Hsp90 and p53 Thermal Shock Proteins in Breast Cancer. (2017) www.archivosdemedicina.com/medicina-de-familia/expresioacuten-y-asocia..

Co-chaperone members from the HSPA, DNAJ, HSPC families are indispensable for proper activity of p53 as a transcription factor and tumor suppressor . Chaperoning the guardian of the genome. The two-faced role of molecular chaperones in p53 tumor suppressor action (2018) www.sciencedirect.com/.../S0304419X17301774

www.ncbi.nlm.nih.gov/.../16738336

Galectin 3 seems to be a lot of what prevents the body from killing off a tumor cell, p53 creates apoptosis apparently with repression of galectin 3, normally homeodomain-interacting protein kinase 2 (HIPK2) apparently is involved in that function of galectin 3 repression. I had read elsewhere that Pectasol-C and Cucurmin both interestingly will lower galectin 3 and why then I think the method of their cancer fighting properties - its part of what I'll use if I get cancer when I'm 168.

I plan to live forever. So far, so good ;) I am sure some smart people will find an answer or if I get cancer ;)

what to write about? - the pathology of "hubris" which the dictionary tells us is a word the ancient Greeks used to describe - " in Greek tragedy) excessive pride towards or defiance of the gods, leading to nemesis/ destruction :"- in Modern Times the legend of the Golem was referred to by Mary Shelley in her novel "Frankenstein" where the creation of a human being by a Mad Scientist Doctor [sound familiar?] Frankenstein turned into a disaster when the experiment underwent the predictable unexpected clumsiness of human limitations - Frankenstein's Monster became the frightening specter of human frailty and ignorance - while Man uses his intellect to explain the "Wonder of Human Existence" - the pathologically driven human like Bill Gates the major sponsor of funds to create a 21st Century Frankenstein with ambitions to become Godlike if not God himself - this form of pathological heresy is sold to Zombiekind/ Mankind[?] as "philanthropy" - these human improvements are nothing but Frankenstein's Monster for the 21st Century - Pandora's Box has nothing left but "HOPE" - is that enough to save our species?

Yes Stan., we are not in an empire of pharaohs, but unfortunately the "gods" of economics and biotechnology are present in this world, and they believe they have the right to be able to influence natural events and human lives. Professor Antonino Zichichi, president of the World Federation of Scientists, says in an article in the cover of the Italian newspaper "Il Messaggero" that genetic engineering is more dangerous than the atomic bomb. We are in a world dominated by political violence and the overwhelming development of a devastating globalized economy, favored by the tolerance and complicity of government agents and ultimately biotechnology can bring a great disaster.

Genetic engineering, favored by the freedom of action, economic violence and its technology on human life, will make history recognize biogenetics as the criminals of the 21st century, and their crimes against the life and dignity of the human race. man. We must give life to a scientific culture that teaches to distinguish science from corrupt technique, so that violence, in all its forms, political or economic, can be eradicated in our humanity. The technological applications must be exclusively aimed at improving the quality of life and defending the dignity of the human species. Biogenetics with intervention in plants, animals and humans, cloning, laboratory babies, and other genetic interventions without an ethical vision, is a great disaster for humanity, much greater than the atomic bomb. Natural medicine must be supported by epigenetics and nutrigenomics, to achieve diseases, our health is in the hands of a healthy diet, fleeing transgenics, pesticides, fluoridated water, antibiotics, EFM, etc., this is the way of the regeneration of the human race.

greetings Gui - your reply reminds me of Pico della Mirandello's universally acknowledged catalyst for the Italian Renaissance - "Oration on the Dignity of Man" - this document promoted the essential ethical standpoint that generated the most fecund and diverse approaches in philosophy/ science/ the Arts - certainly it does not sound like Bill " I want your money " Gates's propaganda about how Gates is "God" - <http://bactra.org/Mirandola/>

Hi, Stan. "They" will bury this info, just like they bury all the other TRUTH! Here's the latest dirt on Billy Boy. I don't think this DEMON ever sleeps! www.macleans.ca/education/uniandcollege/bill-gates-to-spend-1-1-millio.. I imagine that this is just one of his estates...probably about the same size as his ego! seattle.curbed.com/2017/2/16/14637668/bill-gates-medina-mansion

hi there Randy - the nuts and bolts of Bill " I am BIG TIME rich"Gates - such as his 24 bathrooms and 10 baths - God, this guy feels dirty - the filthy rich want to be as clean as money can buy - no dirt on these guys - like the Queen that ultra rich woman, - Gates never touches money - it's all digitalized - here is an art image done when I was in my 20's -

I just now 'stumbled' across this Trains Magazine online weekly news article as one (of many) example of how Bill Gates gains and maintains his popularity with philanthropic donations with tax credits via the Gates Family Foundation. In this particular case, it's the scenic and historic 64 mile Cumbres and Toltec 3' narrow gauge railroad jointly owned and operated by the U.S. states of CO and NM, and is on the National Historical Landmark register.

Every attempt to alter what the Nature / Creator intended to be, will backfire with vengeance. No doubt about that. Screw the f.. scientists and what they are trying to do.

as long there is not any control where big money of the so called philanthropists goes , who wants to control and destroy the Nature for imaginary profit(cabal) the life creation is in absolute jeopardy. They play God/Mother Nature , that means that they must be eradicated as the Pest does ! Better insanity as the so called "science"of today could not be possible. Look carefully and wise : there is no cure for nothing at this moment as long your body can not cooperate and do the job with more than 90% of everything to restore your normal activity. . All medical statistics and progress are absolutely fake, FAKE because they make appeal on wrong ways forgetting that the rest of the graphic in any point the function is ZERO(Dirac) . Restitutio ad integrum remain only a marketing dream(as it is misused in criminal ways today) as long it was a sane way of the traditional medicine which was proven by thousand years of huge benefits. Stop this insanity as long it not too late ! .

Chlorella; A food which contains proteins, RNA/DNA, beta carotene and also cleans heavy metals out of the body. A food for all seasons and many reasons.

Posted On 06/21/2018

jansgrace

"scientific progress" ??? "it might be too late to fix or stop the problems we created". Word.

Posted On 06/21/2018

badboy2

This article clearly shows why we need to stay away from all processed foods, smoking and other things that we know is bad for our health.

It seems alarming, stocks in CRISPR _only_ dropped 5 to 13%?! Might that simply mean few of its investors heard that report yet, so didn't drop it? Or, that many investors don't care if they fund unhealthy products? Or, perhaps those holding those stocks, hope waiting might produce a safer version? OR, that warnings/adverse data might get swept under the proverbial rug, as industries have been used to doing?

So many doing tech/sciences imagine they can "out-science Nature"...as-if Nature hadn't already figured out what works! Sure, we can change things, which might appear good, initially....but, in today's profits-above-all marketing models, & limited ability to foresee adverse future effects on SO MANY scientific developments, maybe it'd be wiser to exercise more caution & restraints, before launching stuff like Nano-particles; or, promoting tens of thousands of manmade chemical compounds triggering diseases, not just in humans, but planet-wide, species-wide; & now, CRISPR, & so much else.

Thank goodness it was disclosed this soon, rather than it getting hidden for 60+ years [like hydrogenated fats, or DDT's, or, Talcum's adverse effects, etc.]

Perhaps, the real questions might include: Will CRISPR get dropped, or will they invent novel ways to promote/reinvent/slam public with it, like so many industries have been doing, for so long? Haven't we learned from old malfeasance, like: Oleo long ago, its liabilities hidden for over 50 years; Brachy Therapy Implants [radiation bead implants] research data, so wickedly manipulated, enabled promoting it as a cancer "treatment" it was always unfit for, for the past 35+ years.

SO many treatments & drugs reap huge profits for investors, launched on time-limited, conditional approvals, but never got properly proven efficacy or safety. MAYBE we need refresher courses in nursery rhymes, like: "There was an old lady who swallowed a fly..." & consequences.
