

## ccsull

Several years ago I stumbled across sugar for cuts, scrapes, burns etc. I wish I had know about it decades ago. I looked it up on line and found articles about sugardine - a mixture of iodine and sugar. It is apparently used by vets too. Sugardine works great but later I found that the iodine doesn't really do much and the sugar alone works just as well. Sugar alone is rather messy though. I also read about honey for killing bacteria. I have since been mixing powdered cane sugar and honey to a consistency of peanut butter. It stores well and this mix doesn't run off like honey or fall off like sugar. My cuts heal quickly, no scabs or scars. The mix also kills the pain.

## seg

I just saw the first ingredient in this salve is wine, so hands down i'm sold...There are so many other natural remedies in nature, but don't look to your nearby conventional doctor to get this salve ..First of all they have no clue about what the human body needs or thrive on, and secondly you cannot patent something that exists in nature , therefore no monies to be made from these products so naturally big pharma is not interested... Besides if everyone or most people are healthy, then you stop or slow down the gravy train and heck, that's not good for business..So yeah, don't look for anything good coming from these Cartelians, you likely have a better chance of seeing hell freezes over first..or close enough here ..[www.youtube.com/watch](http://www.youtube.com/watch)

Naturopathics can be effective against many bacteria and viruses, protozoa, etc so long as they are properly blended and dosed. And both blend and dosage are keys. Stephen Buhner's books provide basic knowledge, science-based with clinical tests cited, about the mechanism by which various herbs work. But one has to keep in mind that blending is key, not (in most cases) individual herbs. Read more: [www.amazon.com/s/ref=nb\\_sb\\_noss\\_2?url=search-alias%3Dstripbooks&fi..](http://www.amazon.com/s/ref=nb_sb_noss_2?url=search-alias%3Dstripbooks&fi..)

Herbs "know" how to work without either creating, or being hindered by, the antibiotic resistance problem. They don't usually directly kill bugs, instead they either support the body's own immune system, which eats up bugs, or they work by various mechanisms unique to each plant. Cranberry inhibits the clinging of E Coli to the bladder walls, allowing the bugs to be washed out in the urine. Resistant to antibiotics? This mechanism bypasses that problem. Elderberry binds viruses and inhibits their replication, so they have to die out, while also thickening human cell membranes so viruses can't penetrate as easily in the first place. Stephen Buhner writes that penicillin contains one constituent: Penicillin. This allows the bugs to adapt to it. However, plants have multiples of constituents that work together, so the bugs can't outsmart them. Nature is wise! There are many more mechanisms by which herbs and supplements work. see the books above.

## **forbiddenhealing**

Look to Mega C/baking soda, IV C, H2O2, HBOT, O3, MMS chlorite...The body runs on electrons, but immune defense operates on powerful oxidation.

## **mirandola**

You sure as heck don't want to get that Medieval formula directly onto the eyeball!

Posted On 05/02/2017

---

## **LNLNLN**

I don't believe stats any more. But probably the eye salve could work. They didn't have 'drug resistant superbugs' in ancient times...I'm guessing...but if the ancient formula is that good that it can overcome those, Hooray! How odd it is that many scientists are beavering away at finding cures, (some cures for diseases which only exists because drugs, such as anti-biotics, allowed them to emerge) whilst others beaver away at creating weaponised bugs which there is no cure for so that they can eliminate 'unwanted' millions of people. S'juss crazy!

## stephenf999

I've had a lot of success against infections with the grapefruit seed extract called Citricidal. This brand of GSE used to be in the products from NutriBiotics, but it was removed from most of their products about 4-5 years ago, without any fanfare or notification to consumers. It is only NutriBiotics' "Professional" line, plus their "Maximum GSE" one-ounce liquid that still list Citricidal on their labels. It is very bitter, so when I use the liquid I put it into empty gel-caps to take. It doesn't matter if the bottle has "original formula" on it, as many of their bottles used to state this even after some other GSE was substituted for Citricidal...you have to check the ingredients. Apparently, and I'm not sure of the details, the manufacturer of Citricidal failed to supply the FDA with whatever it required, and so the product was no longer allowed for internal use since around 2012, but had been used internally for something like 20-30 years before this restriction. I've only seen the Citricidal containing NutriBiotic products on the Internet since that time...never noticed them in stores. There used to be a lot of reviews on Amazon warning and complaining about this change, but most of them are gone now. Most reviewers who are aware of this change find that the newer grapefruit seed extract in most NutriBiotic products is not effective. I have twice used Citricidal when I got serious sinus pain, enough to go to a doctor if the Citricidal had not worked, and both times sizable doses of it knocked out the problem in a day or two. Whenever I'm feeling "off" and suspect I'm coming down with something, I take one of the forms that Citricidal is available in and it's never failed me. I did notice some warning on the Internet against using this product, but by that time I had used it successfully and without problems. So, you may want to search for warnings against it to see if they make any sense to you. I don't know if it kills friendly gut bacteria.

## einsteinandtesla

My Granmother would always leave a cut onion at the entrances to absorb bacteria, recently I saw a person serving at a deli counter, his fingers were covered in warts, are we really promoting a vaccine against HPV, not a chance would I consider giving it or promote this also chive flowers infused in coconut oil makes a hair tonic that can reverse greying hair, it also can relieve itch! Mine are as close to organic unfortunately a lot of neighbours use round up.

## **mommabear3**

My husband gets terrible lingering bronchitis every time he gets a cold or virus. He's under a lot of stress at work and can't afford to miss time there. This time I mixed up a little potion I'd read about somewhere on the Internet. It was lots of garlic, lots of ginger, a teeny bit of cayenne, lemon juice and honey. I use a brand called really raw honey. I swirled it up in the food processor and put it in a jar. Let me tell you, this is powerful stuff! You only need a smidge, about a 1/4 tsp, if you want to keep your stomach lining intact. He took it about 5 times a day in some tea, with a bit more honey. We used breathe easy. Black tea is a bronchodilator so would also work. He got better over the weekend. It felt like a miracle. Once he felt improved, he diligently stayed on a 2x per day maintenance dose for about a week. This is the first virus he's had that didn't turn into bronchitis so these old remedies can work. I don't think it goes bad so I believe you can make a big batch and keep it in a jar or freeze it in a jar for the next time. Frankly, between the problems with insurance and the problems with medications, including antibiotics, I think we all have to persevere in becoming medical survivalists.

## **Krofter**

"But drug companies have little financial incentive to innovate new antibiotics, so unless taxpayers end up footing the bill, it's unlikely that such products will enter the market anytime soon." It's apparent that the healers of old were truly interested in... healing. Unlike the modern corporate run medical system whose priority has little to do with healing and more to do with keeping us all sick or making us sicker, to make the quarterly statement to the shareholders look good. Practicing medicine used to be a passion - healers were held in high esteem and were provided with things they needed in exchange for their services. Dr. Mercola's approach should be an example to the modern medical world - dispensing helpful information freely to the world in exchange for an opportunity to sell helpful products.

## **iamblessediam**

Hi Krofter -- It seems Big Pharma is "shifting" from antibiotics, pills, etc. to the vaccine scene - no liability with vaccines - just profit! Get this...they now have a "fat" vaccine - where will it stop with the greedy bums: [[vaccineimpact.com/.../a-childhood-vaccine-for-obesity](http://vaccineimpact.com/.../a-childhood-vaccine-for-obesity)]. **bjs1716gmail.com**

Colloidal Silver should be held under your tongue so it instantly goes to your blood stream; in the same way Sublingual B-12 is taken & the only effective way to get either one into your body. In 2014, I was diagnosed with Bacterial Spinal Meningitis, 4 days you could die or become a vegetable & put in a nursing home to die. My ICU nurse/angel asked if we knew about Colloidal Silver & we said yes, we use it. Her remark was, you need a lot of it. I gave myself 4ozs divided a day, holding it under my tongue for a long while, as I only had an ounce with me. I was also being given a 24/7 antibiotic drip the entire time in ICU & after release, a 24/7 antibiotic drip for 10 more days. I left the ICU straight to my RV, as we were on vacation. Within days I could walk unassisted. I am alive & well because of Colloidal Silver!

**Piw6958**

My question is could we trust the cow gall now that most commercial beef cattle are being given M Rna jabs?

Posted On 04/17/2024

---

**sue2613**

Is it possible that the jabs are retained in all parts of the animal. Muscle meat is the most commonly eaten. This may help explain the serious health problems occurring in the unjabbed.

## **bburns1955**

Best to find a local farm that has grass fed beef, grows their own food, & does not inject their cows...if possible. Or order from a reputable online company like White Pastures. The cost is of course higher than regular grocery store beef, but also safer.

Posted On 04/17/2024

---

## **luccim**

bburns Do you mean White Oak Pastures? One can also find a local organic farmer on website eatwild.com and buy in bulk for best prices per pound. Local Amish farms have best quality and some even deliver.

## **ISpeakCat**

Raw honey does the same thing and is easily accessible to anyone, whereas ox bile is not. Raw honey can be put directly into the eye, tucking a small dab into the lower eyelid. It slightly burns for just a moment. Raw honey (never heated or treated) is anti-bacterial, anti-viral, anti-fungal and is practically the only thing you need in a first aid kit, in my opinion. It does not have to be Manuka honey. St Mary's Hospital in Tucson Az pioneered the use of raw honey in their burn victim wing and found enormous success. Not only does it fight infection, it promotes cell proliferation. Additionally, it coats the raw nerve endings in such a way that it removes pain. Raw honey is also now being used in many hospitals to control, or heal, long standing MERSA wounds that have not responded to conventional treatments. Too bad they don't start with raw honey as first line of defense.

## dejure

I use a toy train set power supply (0-36 volts DC) to make my own batches, about every blue moon. None of it gets stored. It's too easy to make, and light WILL alter it. While it's just anecdotal, we had several farm kitties. All of them came down with something that made them look pathetic. They were having an obvious hard time (runny noses, sneezes, crusty eyes). I brewed a batch and gave them all a good dose. In about three days, all of them were cleared up. A few days later, the old tom showed up and he was in much rougher shape. I gave him his own bowl of milk (yeah, I know) laced with it and let nature run its course. It took him three or four days too, but then he was fine.

## dejure

THEN there was my daughter. She came back from her mom's with a horrible cough that just wouldn't seem to go away. I knew nothing of walking pneumonia and such. That aside, I put about 1/16th cup of food grade, 35% H<sub>2</sub>O<sub>2</sub> in a gallon of water and set it on the ultrasonic humidifier near her bed. Interestingly, the next morning, her cough was gone.

## ela3783

Silver is classified as Heavy metal For purpose of fighting infection it is safe to use sparingly . But not wise to use as a preventive. It will accumulate in excess amt and cause damage even if milder than lead and mercury Best to use nutrients as preventives and cure while using Silver or gold in severe cases only

## hel32265

I make my own Colloidal Silver ... very easy and economic. Check youtube etc for instructions. It can be used as a mouthwash, nasal wash, put over skin sores, broken or damaged but especially effective for internal use. Some use up to a pint a day to rid themselves of infections, eg UTI's, bladder, flu's etc. Start slowly and increase. Never turned blue, never caused an issue with me. There are some good FB sites where you can gain more user information. [www.facebook.com/.../top](http://www.facebook.com/.../top)
