The pharmaceutical industry distorts medicine and politics, encourages disease, and pollutes the planet. It is a disgrace. We have an agribusiness industry that, along with doctors advising water and salt fluoridation, toothpaste, all friends and hostages of the pharmaceutical industry, not only when it comes to the practice of medicine, but also in teaching and research. Suffering and wasting taxpayers' money are two shameful developments. **FLUORIDE EXPERT SQUARES OFF AGAINST EPA ON DAY 1 OF LANDMARK TRIAL** childrenshealthdefense.org/defender/fluoride-epa-day-1-landmark-trial/ (2024).— One of the studies that evaluated the effects of fluoride was conducted by the most famous scientist at the National Cancer Institute, Dr. Dean Burk.

Dr. Burk conducted the largest study in the history of medical science that resulted in fluoride-induced cancer deaths in 10 major cities in the United States. He told Congress that fluoridation was “socially enforcing large-scale mass murder involving unexpectedly tens of thousands of American cancer deaths each year” www.youtube.com/watch Chronic exposure to fluoride has been linked to a wide variety of human diseases, including bone and dental fluorosis, diabetes, atherosclerosis, cardiovascular disease, and hyperkeratosis.

Evidence is presented that fluoride is an enzymatic poison that induces oxidative stress, hormonal disruption, and neurotoxicity. Fluoride synergizes with aluminum in hormonal and neuronal regulations. More than 500 million people live in fluorosis-endemic areas with elevated fluoride in drinking water and biosphere with public health problems. Symptoms of fluorosis range from mild effects on tooth enamel, headaches, dizziness, loss of appetite, to severe pathological disorders. These include dental and skeletal fluorosis, hypothyroidism, sleep disorders, inflammation, IQ deficits and autism.

Fluoride inhibits the activity of antioxidant enzymes such as catalase, glutathione peroxidase (GPx), GSH reductase (GR) and superoxide dismutase (SOD). Fluoride affects calcium homeostasis, protein phosphorylation, cytoskeletal proteins, ion transport, metabolism and functions of all blood elements, endothelial cells, blood circulation, immune system function, bone cells, fibroblasts and lung cells, liver metabolism, neurotransmission processes, brain functions including cognition and mental acuity. The most fundamental adverse effect of fluorides on the respiratory system is the inhibition of Krebs's cycle enzymes and the development of other lung or respiratory diseases.

Fluoride has implications for endothelial dysfunction and vascular disorders that coexist with atherosclerosis and cognitive and thyroid abilities. www.mdpi.com/.../7100 (2020).---

Agrobusiness does not protest artificial "clouds" barring sun from proper radiation of the crops...they must know it, don't they?

Posted On 09/04/2024

Guillermou

Yes RW should protest. The current spraying of climate engineered atmospheric aerosols is not mentioned even though it is mathematically the largest source of fine particulate air pollution. The Amazon rainforest is being cut down at the fastest rate ever recorded, how long will it be until there is nothing left? What role does climate engineering play in the disappearance of all remaining habitats? Video: www.youtube.com/watch .-----There is only one way forward in the fight to stop global geoengineering: achieving a critical mass of awareness on the issue among the general population. A battle cannot be fought without an army; the only way forward in the fight to stop global geoengineering is by creating and recruiting an army of the awakened because the US government and global power is in the hands of large corporations that completely control the flow of information. There seems to be just no end to the assaults on us all starting right in the womb - cradle - to an early grave - tomb. Right along with it all, creative data manipulations, clever messaging. The way these bad birds operate there would be little to no surprise that because so many now have been gender disrupted, neutralized, sterile from other toxic offenders that a message would be presented any possible fluoride problems have been reduced, simply because so many fewer babies are able to be even born. How compounds such as fluoride, mercury in fillings to many things to mention are left untouched, taboo to challenge is unconscionable.

If not outright depopulated, dumb us down, steal our birthright potential to develop to our full potential. Often fluoride use has been supported by a familiar message - follow the science. Fine, follow what science? Old science or new science able to detect the formerly unknown impacts? Furthermore, how is a One Size Fits All is applied with Fluoride being added into the public drinking water supply whether anyone needs it, wants it or not?

Posted On 09/04/2024

Guillermou

Yes just, humanity is subjected to a synergy of vectors that enhance mortality and disease that connects with environmental pollution, food, vaccines in an environment that enhances the toxic situation of biodiversity and the pathologies of a sick humanity. Unfortunately, deaths, illnesses from toxic and ineffective treatments will enhance the economic and social crisis, and the poor will celebrate a funeral, while the profits of corrupt elites will grow. Only by increasing profits, monopolizing theft and diseases that serve the vicious circle of destruction and tyranny of corrupt elites, Big Tech, Big Food and Big Pharma constitute the web of disinformation that has subjected the institutions of "health" to destroy the industry of vitamins and herbal supplements.

The earth has become a toxic soup. To follow money, greed and power, is to follow the trail of those who treat people as an object of their ambitions. The mentality required to put fluoride, a great poison, in drinking water, demanding and advising the use of toothpaste with fluoride, implies a dehumanization and lack of ethical values. The ADA propaganda on fluoridation has been discredited by independent scientists, both in the United States and internationally.

Bad "science" is at the service of the powerful oligarchies that control the flow of money. This bad science is driving a decadent world, a contamination that reaches all parts of the planet. This fits with the 'free market' ideology whereby free will and choice prevail and disease, unemployment, poverty etc. are the fault of the victim, rather than the consequences of a system structured (politically and economically) to serve the needs of powerful commercial interests and over which, as in the case of exposure to fluoride and all other contaminants, the public has no control.

When do we start to consider that stuff like this is done intentionally, that officials are aware of the results and see them as goals rather than mistakes? There is no news agency covering this report or considering that any concern about fluoride is anything but tinfoil battery, much like questions about the over-vaccination that children undergo.

Posted On 09/04/2024

Really!

wareagle82 - my take on this is that they are piling on one harm on top of another on top of another. Fluoride wasn't getting the job done fast enough or greatly enough to satisfy the powers that shouldn't be so they started adding harm every which way they could. The over vaccination of our children and now our everyone is a known killer. How many people of all ages have died from all of these so called vaccinations? How about other so called medications? Look at the so called medication, statins, that Dr. Mercola just published an article about. I think the term is gateway drug....one drug leading to another being needed on top of it.

Isn't it strange that it was during covid? There was a vote to fluoridate our city's water again, after covid started too. If I recall correctly, fluoridation was used in Germany in the WWII era to "calm" the population.

A child would understand this: Take any fluoride toothpaste and read that if one swallows more than a brushing's worth (size of a pea) of the toothpaste, one should get to a poison control center. In other words, do not swallow fluoride, as it's toxic. Let's assume that fluoride actually does help prevent cavities. Then, using toothpaste makes sense, since one works the fluoride around and on the teeth, and one can control the intake. What happens when one drinks water ? Well, try it to see that hardly any of the water touches one's teeth, just some on the backside of the upper front teeth, usually. (How does this do anything for protection of one's teeth?

) But, the key is that the fluoride is swallowed. So, on one hand, one shouldn't swallow fluoride (toothpaste) and on the other hand it's put in water which gets swallowed, with no controls over quantity. If one just thinks about this contradiction, it becomes quickly obvious that putting fluoride in our water is insane. There's absolutely no logic to it at all. Why haven't I seen the above presented anywhere, ever ? Maybe because it's so " in our face " that it gets completely missed. Or, maybe because on Planet Normal this sort of insane behavior is considered, well Normal. LOL. Bob

when you run fluorine on your gums its like a direct shot into your blood..Most street junkie knows that rubbing cocaine on your gums is a instant buzz.....rub anything on you gums is like a direct shot to the blood.....another is up the rectum.....a direct shot into the blood. Toothpaste people know all these facts..but 90% the population are in the dark.....like mushrooms....kept in the dark and fed a lot of bullsh!t

Posted On 09/04/2024

Munnster

My Dad used to work at a water district in So Cal and he would not let them put fluoride in the water when he was employed there, since he argued that it was a neurotoxin and should not be in the water. The district kept it that way until the State of California mandated it for all water districts in California. Several people argued that point with the State at that time, but the bureaucrats just ignored them.

Granny on the warpath

Several years ago, the fluoride contract in the city of Port Angeles, WA (population 20,000) came up for renewal and when the news got out, people fought back and the contract was not renewed. We have excellent water, I go over to the Seattle area occasionally and the water is terrible there.

Posted On 09/06/2024

lookforit

Fluoride is a chemical waste product used in industrial manufacturing. **EXTREMELY TOXIC**. So toxic its hard to find ways to dispose of it. So they put it out water and toothpaste and we were sold the big scam that it was good for our teeth. Pure fiction, pure poison! Evil Pharma caught on to how bad it was for us, now it's an ingredient in several top prescribe pharmaceutical drugs such Lipator and Prozac. Fluoxetine has prefix fluo like many other Pharma drugs, usually means addition of fluoride. There is more than one reason why these drugs are so evil and bad for us. Gods wrath will surely be poured out on these sorcerers as the Bible calls them. Ancient Greek root word for sorcery- pharma!

How many years has it been that the alternative medical community has been pushing back against fluoride in the water supply? The counterattacks have been brutal it sounded as if you were denying the virgin birth. Amazing the hold that this old-line dental practice could develop such a hold on people's minds that to question it made one "questionable". I live in Chapel Hill, NC, home of the mother campus of the University of NC system where Dr. Birnbaum lives and our water district adds this poison to the otherwise high-quality water supply. Some years ago, an employee whose responsibility was to maintain the fluoride injection system was fired after it was discovered that he had intentionally been down-regulating the equipment so it was not putting the required level of poison into the water. Sabotage for the public benefit did not win him any accolades.

Another absurdity is that fluoride also mobilizes lead in pipes. We are concerned about lead (also a neural health concern), and could get a two-fer reduction in brain damage by eliminating fluoride (and maybe we can eliminate estrogen-simulating pvc pipe replacements as well, a three-fer).

tessmhall

"The naturally occurring "calcium fluoride" is not nearly as poisonous as the industrial toxic waste, hydrofluorosilicic acid, which is usually added to many water systems across the country. It causes health damage in thyroids, brains etc" (eldoradosprings.com) I have heard this before. Can you comment on this Dr. Mercola?

Thora61

Finally someone is making the connection between black and green tea and fluoride content. I have been yelling this from the rooftop for years. I discovered the sun tea I would consume all summer long was causing severe foot and leg pain by the end of the summer. I quit drinking it and I haven't had a problem in 3 years. Even my bunions quit throbbing, no pain! About that time I discovered that I carry a DPYD gene which makes it difficult to metabolize fluoride based chemo. My mom had a horrendous reactions to that chemo for 1 1/2 years of treatment, but the doctors never thought that it was the fluoride in the chemo.

This explains why she had blood clotting issues with the chemo. Now I'm positive it was the fluoride because of the DPYD gene mutation. Five years before that she took Levequin (fluoride based) and developed a torn rotator cuff, sciatica and high BP. I avoid everything fluoride after watching watch my mom went through. I have to wonder how all this fluoride I consumed and built up in my body since I was a child/baby has affected my kids while I was pregnant with them. This is criminal!

There are people out there that CAN'T metabolize fluoride efficiently. I'm very confused by this article warning people about black and green tea and then there's another article on this forum praising the benefits of it, gut health??? I'll take probiotics before I ever drink that kind of tea again. I've schooled my kids on the foods and meds to avoid because the government isn't going to do it.

Posted On 09/04/2024

[amantakhee08gmail.com](mailto:amantakhee08@gmail.com)

Thora61, the article Black Tea Is Great For Your Gut, does state the dangers of fluoride in tea. "Another way to explain the difference is that black teas may be oxidized for two to four hours, while green tea isn't exposed to oxygen at all. Different colors and flavors of tea depend on the way the plant is processed. The darker the tea, generally the longer it has been oxidized, or exposed to oxygen. One thing you want to watch for when you're buying tea is the processing methods, which is why you want to look for organic teas. Otherwise, it may have undergone a heavy dose of pesticide spray."

Posted On 09/04/2024

[amantakhee08gmail.com](mailto:amantakhee08@gmail.com)

"Another problem with tea may be exposure to toxins from soil and water, such as heavy metals and fluoride. A clean growing environment is essential to producing a pure, high-quality tea, so be mindful of this when choosing your source."

Fisher153

you need to consider dosing. although tea may have 4 ppm fluoride, you only drink a cup or two a day and receive multiple benefits from the tea. however, you drink 2-4 liters (8-16 cups) of water or more at 1 ppm a day and use it for cooking as well. the dosing received from water is much higher, hence the danger. also, if you make tea with fluoridated water it adds to the dose. if we did not have fluoride in our drinking water, our bodies could easily accommodate the F in tea and other food sources. so drink your F in tea, but get the F out of the water and all will be well.

As a legal reminder, adding a medical additive to public drinking water is a violation of the Food, Drug, and Cosmetic Act. It provides irresponsible administration of a medical treatment without dosing control. I don't understand how it has been allowed to persist as long as it has. You can thank the EPA who refuses to properly regulate this TOXIC SUBSTANCE under TSCA (the TOXIC SUBSTANCE control act) , and shills like ADA who advocate to use our public water systems to dispose of hazardous waste from the fertilizer industry... through us!!

Posted On 09/08/2024

JoeDontKnow

Fluoridated water seems criminal to me, but what about toothpaste? I didn't see any evidence linking fluoride in toothpaste to harmful side-effects, in fact the article makes a fairly large logical leap from fluoridated water to telling readers to avoid fluoridated toothpaste. My family lives in the country on well water (no fluoride) and we formerly used non-fluoridated toothpaste for years but had tooth decay issues (compared to most of the American population we have a low sugar diet, and the kids have about 1 soda a week). It seems like fluoride toothpaste is the only way to rebuild enamel and we have been using it for the last year.

The results have been phenomenal. Tooth decay has reversed, and all of our teeth are cleaner and stronger, so much so that I feel like non-fluoridated toothpastes should have a warning label "unless you eat like a rabbit, this will increase your cavities and dental bills". Can someone post a link to a quality study on the harmful effects of fluoridated toothpaste? Was there evidence buried in one of the referenced studies?
