Remember, it was the USDA who created the Food Pyramid. There's no pun there. It really is a food "Pyramid" scheme.

Posted On 07/10/2024

juststeve

Perfect! Nearly all of it is Pyramid schemes, Ponzi schemes. The Bernie Madoff defense but it didn't work for him as if it did, it would expose too much to a larger public awareness.

.....and also. The “green” globalist movement is in full swing and has nothing to do with “saving the planet” but, on the contrary, with taking complete control of the world's supply of fuel, money, land and, of course, the supply food. There will be electronic identification tags for livestock, also known as RFID ear tags, they are primarily used for traceability of interstate movements of cattle and bison. Now the globalists and the US government want complete control of the US food supply (so they can drastically reduce it), so tagging all livestock and injecting them with spike proteins is an important facet of the War on Animals.

Food that is being rid. Once the US Department of Agriculture can find out where all the cattle are located, and which ones have not been injected with “anticoagulant” mRNA serum, mass execution and live “meat” slaughter can begin in the United States, which will force the entire population to consume toxic, laboratory-made Frankenstein meat, which causes cancer and contributes to population reductionism. x.com/.../1802765119866159441 (07/17/2024).--

Fraud is “without a doubt the biggest threat to organic products,” says Lynn Clarkson, CEO of Clarkson Grain, an Illinois-based supplier of organic and non-GMO grains. “Every day, conventional corn and soybeans are sold with fraudulent organic certification.” “Organic products have been a very attractive target for scammers,” says Gwendolyn Wyard, founding partner of Strengthening Organic Systems, LLC, a new advisory firm focused on preventing organic fraud. “We have the perfect recipe because we have a demand that exceeds supply and, in many cases, a higher price.” With high prices for organic products, criminals or even some farmers try to profit by selling grains or products grown by conventional methods (with pesticides and even GMOs) as organic, violating the rules of the National Organic Program.

One of the underlying factors driving The fraud is the greater demand for organic corn and soybeans than the US supply of such grains, which are used in organic poultry production. As a result, the United States relies heavily on imports of organic grains. About 26% of organic corn and 76% of organic soybeans used for poultry feed in the United States come from abroad, according to Mercaris, an organic market data company.

Those beans come from the Black Sea region, including Turkey and Russia, as well as Argentina and Africa. Countries in the Black Sea region are suspected of sending fraudulent supplies of those grains, according to John Bobbe, a Wisconsin organic farmer and former director of OFARM, which oversees organic farmer cooperatives in the Midwest. non-gmoreport.com/articles/fraud-is-unquestionably-the-biggest-threat-.. High Jacking, a constant thing. Ever since the original Robber Barrons, monopolies with massive influence have moved back and forth, in and out of sight depending on what the times demanded to keep their true designs unseen. When We, the People suffering the direct effects of ever-expanding concentration of Power & Control seek and find the sources of the troubles, find solutions for those offenders, the 1% High Jacks, turns them inside out while holding an appearance of compliance. Then the Real Deal gets buried in the sands of time.

The Monopolies turned into Too Big to Fail and now the Too Big to Fail's have turned into Global Too Big to Fail's who have taken over Gov't's globally. Clever word games, law manipulations, messaging through Legacy Media and shills all through the system create a never-ending story of right is wrong, wrong is right. Words, laws mean what we say they mean. Even larger problem, this is not limited to Organic Food Sourcing. Foxes have been replaced by wolves.

For the average person who has not been involved close enough to it all it all seems to be a word salad mish mosh leaving them not to know what to believe. Oh blah de, oh blah dah, the band plays on. The wolves have been successful in promoting the message, Gov't taking over industry is bad, and this actually is true. However, missed in it all is Industry taking over Gov't is just as every bit as bad. When We, the People, the 99% are under direct, stated threats of the Wolves and our long-suppressed issues are becoming threats to Life itself expose the most critical issue, need is addressing and solving the Corruption.

Right needs to be Right again. Black needs to be Black, and White Needs to be White. Wrong is still Wrong no matter how clever the Wolves are, and wrong activities will be corrected one way or another whether We, the People find positive ways to take action or not. Peaceful things make peaceful things happen. Destructive things bring destruction.

Jimmy Dore, Gates is a Monopolist. Monopolizing The Food Supply! w/ James Corbett - www.youtube.com/watch Just the Gut speaking but, it is concern that much of the land grabbing going on, not just Gates and all buying up farmland, but entities such as Blackrock buying up massive properties. When as we have seen in the links alerting us how if we have loans, what we believe is our property may have ties to banking interest who can take it as their assets. Also a concern if the Powers that Be force their desired cyberbanking, giving what they believe to be an allowance big enough for our needs could also control whether we are able to pay our land taxes. This along with the message only landowners are citizens and have a right to participate in gov't. The land grab may well be laying the ground to return all belongs to the Monarch, the King. More of we are renters, leasers as Vandana Shiva has described so well in her work.

Very well written Just, large agri-food, technology and media companies contribute and manage the advancement of society, with enormous amounts of money to invest and managing billions of data. Not only do they cause tremendous damage with their interventions, which most of the time sabotage the market and competition, it also means giving up a productive contribution to the material progress of society. Lobbies try to influence politicians to change the laws in their favor, and many times their work consists not so much in directly pressuring, but in generating a state of opinion in society that causes political authorities to be inclined to what they want.

they look for. In short, the function of these lobbies, their business, is to remove those at the bottom to give the money to those at the top. It is clear that the way corporations influence our US government is having a terrible effect on the health of humanity. We have to combat the disaster, the situation has never been so serious and the future of all of us is threatened. People must defend nature and the fruits they feed on must put it at their service. The man of spirit feels permanently indignant against injustice and directs his love towards the earth and his people, especially towards his children.

In the human community it is necessary to create a home that arises from his participation in the joys and sufferings of his fellow men. Initiatives must be sought for the participation of community-based organizations, the support of true health science, biodynamic agriculture and environmental conservation, so that together we can achieve concrete, integrative and sustainable solutions, to fight against great threat from tyrants who want to dominate bodies and minds.

Organic fraud is one of the most common types of food fraud. Karen Constable of Food Fraud Advisors took an in-depth look at the survey results to see how organic foods fared. The 2019 survey analyzed nearly 10,000 samples of 21 types of fresh, frozen and canned fruits and vegetables, as well as tomato paste, dried chickpeas, rice and oats. The official report contains excellent and detailed information on the sampling systems. The report also provides an overview of commodity results and analyzes differences between domestic and imported products, but does not specifically analyze organic food results. In 2019 and 2020, the USDA acknowledged that there were widespread compliance problems in US organic certification programs.

About a quarter of foods labeled "organic" contained residues of at least one pesticide and just under half of them had unsafe levels. There were a small number of notable samples (1%) that contained high residues or unsafe levels of multiple pesticides. Summary: ---26% of the "organic" samples had detectable levels of pesticides. -----9% of the "organic" samples had unsafe levels** of at least one pesticide----1% of the "organic" samples contained four or more pesticides at unsafe levels.---The 1% of the "organic" samples contained traces of more than 10 pesticides.

It is as stated before, a Never-Ending Story of We, the People have to deal with High Jacking, keep reinventing, worse than starting from scratch, all at the same time the offenders, the Wolves, consolidate their abilities to do the same old, same old thing. And also important, not to throw the baby out with the bathwater. What is surviving as Organic and truly Organic needs whatever support we can give it, enhance it. Real, True Organic on its own is evolving into Biodynamic/Regenerative however we must realize the same thieves are sharpening their knives to cut apart such.

We, the People have to take away their knives. Oh, also while corruption to make it legal to appear Organic is a problem, as always so can individuals, what is a huge problem is the toxic sea surrounding all of us, everything makes it near impossible for the time being for even the most diligent Organic operation to produce goods without some contamination from outside sources. Just the Glyphosate & others in rainfall are going to taint to some degree.

Fraud even happens at the grocery store. I can tell when organic pasture raised eggs have been switched out for regular cheep ones. I think someone does this while pretending to check the eggs for cracks, I have noticed this in more than one store. Your best bet is to buy fresh from local farmers

Posted On 07/10/2024

juststeve

Unfortunate but, corruption exists at the individual level too.

Where are the good people in places of power? Either there aren't any or they are so few in number to make a difference. It is not just food. What about the obvious spraying of chemicals and metals in our sky's? Where are the good people in places of power fighting that and all of the other injustice's? When called good teacher, our Master Yahushua said "Why do you call me good? No one is good except Yahuwah alone. And, Romans 3:10 "As it is written: "There is none righteous, no, not one."

Posted On 07/10/2024

Darwina

Typical. Overseas imports/competitors get the unfair advantage as they don't have to comply with the regulations that home growers do.

Posted On 07/09/2024

I guess that the answer is to check the country of origin. I think the EU countries have quite strict controls. Not so sure about my own UK any more. I do wash and soak all veg/fruit before cooking or making a dessert, in filtered water. We have quite good water quality from the tap (barring supplier accidents!) but is still noticeable chlorinated.

Posted On 07/10/2024

gypsyluv

Right. Just like all the illegals are being treated like royalty while the rest of the US population has to suffer and pay taxes to pay for this injustice!

I recently found out Monsanto “ modified” the weather.. this is why people are getting record numbers of diabetes. If all the weat is modified how can Arrowhead Floyr say they’re non GMO? They didn’t answer my question on what weat they use. West used to grow tall, now it only grows two feet. Then most places spray glysohate on it to hurry the drying process. In short we’re eating that. I’ve turned to ancient grains, but wheat flour is so much easier. Can you help with this?

Posted On 07/10/2024

gypsyluv

Yes. Just don't eat grains. Gluten and other lectins found there are quite bad for you. There's a good book called Wheat Belly. Check it out. the author does mention the difference in how wheat is grown. It's quite awful.

How come ECOCERT is still in business? This company should be held responsible for all the frauds it's at the origin of. Few years ago, a comparison between a German organic certifier and this cheating ECOCERT showed that ECOCERT controls were extremely loose on ginger from China, while the German certifier rejected a vast majority of the ginger from that same Chinese producer. The details: while the ginger was grown without pesticides, it was washed with a heavily polluted water, ECOCERT did no chemical analysis on the final ginger, was happy enough that no pesticide was spread on the plant. ECOCERT certainly stamp organic seals on authentic organic goods, but it can't be trusted. And I'm French, the country of origin of these cheaters.

Posted On 07/10/2024

gypsyluv

I would not eat anything from China and would not feed any Chinese products to my pets. Don't buy toys made in China either.

yan25970

If you aren't growing your own food and raising your meat you cannot guarantee it's source or claims of being organic. You just can't. You simply cannot and waiting for the government to protect you from this fraud and any other is akin to expecting the squirrel in your tree to do it. If you cannot or will not farm your own food then this is what you are left with.

The word "Organic" is a hi-jacked word that should have never been used for this program. As I learned in a U.S. College in my Organic Chemistry class: Organic means Carbon based compounds. Carbon Based compounds are wide spread, and includes many things, not specially grown food stuffs. All food is Organic in the Chemistry world. The use of the word organic in the case of certified foods should not have been used and the creators of it should have been more Innovated in creating a new word to describe. Yes create a new word instead of hi-jacking a word used in other ways.

Posted On 07/10/2024

gypsyluv

Even the term "Non-GMO" is misleading because it allows ppl to believe that it's the same as organic. And as you said, they hi-jacked the word.

..and also organic oranges grown in Spain have serious marketing problems. The Rapid Alert System for Food and Feed of the European Union (Rasff) has once again registered a food alert that affects Spain. This European Union body allows the exchange of information on the safety of food once it crosses borders. This is how he has been able to detect in recent days the presence of prohibited pesticides in Moroccan peppers. Now, the affected product has been some oranges from Egypt that were intended to reach the Spanish market. The food passes strict controls every day once it reaches the border of the country that is either going to market it or start a new chain.

distribution to other countries. In this case, Spain has been in charge of detecting high levels of chlorpyrifos in these oranges, a dangerous insecticide that can have various consequences on the health of the population. The analyses, according to the portal, have shown the figure of 0.086 mg/kg-ppm, when the maximum limit is 0.01 mg/kg ppm. These oranges would not have reached the Spanish market due to the rapid arrest, but they still recommend caution with those that have arrived from the African country and ask not to consume them. As usual, the RASFF does not provide more information about the brand under which it is marketed or the impact it may have if consumed.

One of the greatest impacts of this banned pesticide is on the nervous system. The European authorities disapproved it once they learned of the consequences it had for people's bodies: "EFSA has identified concerns about possible genotoxic effects, as well as neurological effects during development, supported by epidemiological data indicating effects in children," It was known in a statement released in 2019. Exposure to this insecticide can cause serious poisoning in the body,

Track Record

The federal government has become like a cancer, everything it touches becomes inoperable. The prospect is poor, what kind of person would be willing to work with such people in a daily basis in order to reform its basic ethics.

Posted On 07/10/2024

lordoftheflies

The Organic Foods Production Act is a nice idea. But it is easier to create legislation than to enforce it. The Dept of Agriculture is not funded adequately to carry out the needed inspections of foreign imports.

Does anyone know of a site that has a comprehensive list of companies that source and manufacture their food products in the U.S.? I read labels when shopping, but it's very time-consuming and label information is often incomplete regarding origin.

Posted On 07/10/2024

peter.azlac

Much of what passes for organic in the West is not because organic foods should be grown with mature compost and many organic producers use raw pig or cattle manure. A few years back this led to six deaths from Listeria which the German authorities tried to blame on Spain. I worked in agriculture and came across a number of so called dairy and beef farms with sheds full of ammonium nitrate fertiliser which since its action is the same as organic compost cannot be detected once in the soil. So we do not have to look to African and Asian countries for fake organic food it is right under our noses with markets often mixing boxes of organic and inorganic foods together. Given the 50,000 potential toxins in organic food I avoid it like the plague though I also avoid meat and milk produced with grains treated with glyphosphate or at least to the degree possible since it is now present in grains produced for human as well as animal food.
