To have a healthy baby, child and adult : The most important commandments" here : 1. Never ever give formula to your newborn, baby, toddler : What they need is breastmilk until the need for milk is over, which means that your child will be able to say in 1, 2 or more languages : Mom, I don't need to breastfeed any more". Why ? Well, breastmilk nourishes a correct intestinal flora. Formula nourishes a pathological gut flora. Is that so difficult to understand and to practice ??? If a baby gets formula, they CANNOT have a correct flora.

Impossible. 2. Never ever allow your baby to have a vaccine ! Vaccines do not only damage gut flora, but they damage the intestinal wall which means the intestines become leaky ("leaky gut") with all the consequences this might have : all sorts of allergies" and brain damage (Prof. Karl Reichelt, Elke Arod, Prof Christian Arod). 3. Never ever allow antibiotics to enter your baby or child. No human being ever needs" antibiotics. What they need will probably be vitamin C (high doses) and/or magnesium (MgCl₂).

(See Frederick Klenner, Gilbert H. Crussol, Andr Neveu, Pierre Delbet). 4. Babys who are allowed to grow up in a natural way (Natural Hygiene see Herbert M. Shelton, T.C. Fry, Andr Passebecq and others) will never be severely sick. To live healthily is a Fundamental Human Right. Which simply means : Nobody has the right to refuse breastmilk, nobody has the right to vaccinate, nobody has the right to give antibiotics or unhealthy food to their offspring. 5. Stop believing ! Start to think ! Nature is always right !

As autism rates have skyrocketed among US children in recent decades, along with concern among parents, much research has focused on investigating the role of environmental risk factors in the combination of various underlying genetic factors. Additionally, for decades, children who developed autism after receiving routine vaccinations have been denied justice. Their parents have been ridiculed, criticized and abandoned to their fate. The children suffered. All because the National Vaccine Injury Compensation Program (NVICP) determined that vaccines did not cause autism in three "test" claims..

While Pharma foresees exponential growth in a multi-billion dollar market for autism drugs. Justice Department attorneys committed fraud in vaccine injury case, CHD attorney alleges. The global autism spectrum disorder treatment market is projected to reach \$11.42 billion by 2028. Critics called the report "heartbreaking" and called for more attention. Among environmental risk factors such as electromagnetic fields, metals such as aluminum and mercury in vaccines, exposure to glyphosate, acetaminophen use during pregnancy and childhood, heavy metals in baby foods and other environmental contaminants organic.

Studies also link industrial chemicals, such as lead, arsenic, copper, selenium, iron, and magnesium, to the disorder. childrenshealthdefense.org/.../autism-rate-increase-cdc (2023)

Study links parental exposure to toxic chemicals with increased risk of autism and ADHD in children A study published last month in the Journal of Xenobiotics suggests that exposure to toxic substances, such as heavy metals, organophosphate pesticides, and tobacco smoke, likely stimulates epigenetic changes in gene expression. childrenshealthdefense.org/defender/parents-exposure-toxic-chemicals-p.. (2024).--- Kennedy is the president of Children's Health Defense, an anti-vaccine advocacy group he joined in 2015, formerly known as the World Mercury Project.

The group alleges that a large proportion of American children suffer from conditions as diverse as autism, attention deficit hyperactivity disorder, food allergies, cancer and autoimmune diseases due to exposure to certain chemicals and radiation. CHD has blamed and campaigned against vaccines, drinking water fluoridation, paracetamol (acetaminophen), aluminum, wireless communications, among others." In reality, vaccines have been scientifically and legally documented to cause autism many times. Here is the evidence. First, we will provide historical context, looking at some of the scandalous revelations made over the past 30 years that reveal a cover-up of the connection between vaccines and autism.

We will then report on scientific studies examining the connection between autism or neurological and developmental injuries and vaccines, focusing on heavy metals used in vaccine adjuvants. Third, we will cover the history and purpose of the vaccine court, which has paid out billions to injured victims over its thirty-five years of existence. www.globalresearch.ca/do-vaccines-cause-autism-history-institutional-c.. (2023).---

Excellent rundown of information Gui! Might take a while to poke through them all but well worth it. For some just one of any of the offenders listed might trigger Autism. Others it could be one group of combinations, or a different set of combinations to do the trigger. Then there are amplifier affects where once small, or barely noticeable things catch on fire. So many tied to making \$\$\$\$ and damn the consequences and above all else demonize anyone or anything offering a better path.

Thanks Just. New research out of Turkey has found that injecting mammals with Covid-19 "vaccines" causes autism and reduces neuronal count in the brain. The peer-reviewed research, published in the journal Neurochemical Research, looked at links between COVID injections of mRNA (modRNA) and neurodevelopmental disorders. They focused specifically on autism, a common side effect of childhood vaccinations. Using pregnant rats as subjects, the researchers injected Pfizer's mRNA shot during gestation, which had a "profound impact on key neurodevelopmental pathways." The male offspring of the female rats exhibited "pronounced autism-like behaviors, characterized by a marked reduction in social interaction and repetitive patterns of behavior." "In addition, there was a substantial decrease in neuronal count in critical regions of the brain, indicating possible neurodegeneration or impaired neurodevelopment.

Male rats also demonstrated poor motor performance, evidenced by reduced coordination and agility. ". www.theepochtimes.com/health/covid-19-shots-linked-to-autism-in-vaccin.. (2024).---

Breastfeeding and avoiding antibiotics seem like a good plan for new mothers. Along with avoiding unnecessary EMR from cellphone type devices. Keep your distance since EMR is dissipated as the square of the distance.

My apologies for being off topic once again. However, I believe this is important information that needs to be shared. Please watch the video and PASS IT ON to as many people as possible. Consider how your bio-identity info such as fingerprints might be abused if this is a condition for employment. Also, read the excellent comments below this video. This is one more reason to be as self-reliant as possible and have a cottage industry, skill or resources to market or barter. Here's how the FBI and CDC are Tracking the UNVACCINATED | Facts Matter www.youtube.com/watch I am glad I am old. So many challenges for young people nowadays. Maybe I can live my remaining years out in peace on my little parcel of paradise. I no longer trust standard medical care, either.

It seems home schooling is a huge advantage for students nowadays. Most of the home-schooled students excel in so many ways. I have a relative who home-schooled her children until they got to be high school age. It was a difficult transition for the children. They were bullied because their academic level was so far ahead of the other students. They also complained about the immaturity, lack of individual responsibility and poor work ethic among other students in their classes. They are farm kids, not accustomed to fancy wardrobes, which was also a reason for other students to ridicule them. None of this is a problem in the long run. Some day they will be the boss and the other students working under them.

I recall visiting a prominent naturopath many years ago. I mentioned that there were some disparaging comments in my medical file that were not true. I recall her reply. She said she sees it all the time. She considers it an indication of an incompetent doctor rather than a poor reflection on the patient. So true! When I worked in health care, I can honestly say that I never, ever, wrote such things in a patient's file. My job was to identify the problems a patient was having and help them, not blame them. I feel I was able to help many more people by being objective rather than judgmental.

I recall what we called S-O-A-P used for patient records. "Standard" was, basically, our observations. "Objective" was individual patient information. "Assessment" included things like diagnosis and presentation of problems. "P" was for the plan and protocol about how to address the issues. I don't recall ever having a "problem" patient. A few were very agitated--I found that taking time to listen and actually "hear" to their concerns was all that was needed. I enjoyed my work because I was on "a long leash" and had a lot of autonomy. Not so today in many places.
