

**ali31849**

From March 2020 until December 2022 I could not visit my stroke-disabled demented mother in her publicly funded non-profit nursing home because the administrators had made an illegal rule prohibiting entry to those who had not taken 2 mRNA shots. When I learned that the rule had no authority behind it, I fought my way in. Back in March 2020 she had been in good physical condition, mobile in wheelchair, doing daily exercise and socially engaged. Now she was 97 and in terrible condition, emaciated, totally bedridden, suffering dysphagia, with bleeding scabs from neck to knees because of scabies. She was tormented with itching and pain.

Their response was to give morphine and topical steroid cream. She suffered with untreated scabies for four months, because the Ontario government had removed ivermectin from pharmacies and defunded it, and went after the license of any doctor who tried to prescribe it for parasites, never mind Covid. But finally the home's MD jumped through enough hoops and prescribed the two doses of ivermectin a week apart. It worked immediately. The out of pocket cost was nearly \$100 Cdn. But it was too late. She died shortly after, but at least free from scabies. I don't know if I will ever forgive what they did.

## **MIKE54**

I had scabies 2x's. I used Neem oil that I bought at Lowe's. A natural insecticide. The mixes I wrote down are 1 TBS to a quart. .75 tsp to 8 oz. covered my whole body and left it on for 30 min. It kills the eggs too. You can sit in the shower with a book. Also Permethrin I tried. Bought it for about \$10? for 8 oz. at Farm King. Mixed 2 tsp. to 8 oz. of cream or lotion. Nu-stock is a sulfur based cream for animals. Says it's safe even for cats. The Neem oil worked best for me. Saw all of the recommendations on line. Had to look around.

## Guillermou

Interesting reference. Neem has many properties that help eliminate scabies. And this product is rich, among many other compounds, in azadirachtin, which acts as an antinutrient for insects, mites or parasites. 1) Pain reliever: Neem helps reduce the pain felt when you have scabies, thus acting as a pain reliever. 2) Anti-inflammatory: this product also helps reduce the inflammation that occurs in the skin of the area affected by scabies, noticing greater well-being in the skin. 3) Soothing: Neem not only reduces inflammation and pain, but also the itch of scabies, which is very annoying and irritating and causes us to scratch more and get small lesions on the skin that worsen the mite infestation.

of scabies. Furthermore, as a result of the less itching, the affected area also appears less irritated because the person stops scratching. 4) Disinfection: helps to disinfect lesions that may appear on the skin as a result of the appearance of scabies or due to excessive and intense scratching. Neem oil is very easy to use. It should only be applied mainly to the area of the skin that is affected by scabies, spreading it well so that it can reach the parasites, in addition to preventing secondary infections from occurring when there is a wound due to scratches or scratching a lot.

It is also key that Neem oil is not applied only to the exclusive area where the scabies is, but rather it must be surrounded to prevent the disease from spreading and advancing. And by surrounding the area and, as a consequence of its action as an antinutrient for these mites, the parasites will have difficulty advancing and surviving, which in turn helps the scabies heal faster.

Posted On 03/12/2024

---

## Guillermou

Another aspect to take into account when deciding to use Neem oil for scabies is the length of time it is appropriate to leave it on the skin. It is important that it does not exceed 10 minutes so that the dermis does not become too irritated because it is a strong product. After this time, it is key to wash the area very well so that no traces of Neem oil remain, although its properties will remain in the skin that has previously absorbed it. [www.livestrong.com/.../98307-use-neem-oil-scabies](http://www.livestrong.com/.../98307-use-neem-oil-scabies) .----  
[www.mundodeportivo.com/uncomo/salud/articulo/como-usar-el-neem-para-la..](http://www.mundodeportivo.com/uncomo/salud/articulo/como-usar-el-neem-para-la..) .---  
[www.singlecare.com/conditions/scabies-treatment-and-medications](http://www.singlecare.com/conditions/scabies-treatment-and-medications) .--- [www.webmd.com/skin-problems-and-treatments/what-to-know-about-neem-oil..](http://www.webmd.com/skin-problems-and-treatments/what-to-know-about-neem-oil..) .-----

----- In the Ayurvedha and Sidha system of medicine (Indian system of medicine), Azadirachta indica ADR ('Neem') and Curcuma longa ('Turmeric') have been used to cure chronic ulcers and scabies.

'Neem' and 'Turmeric' were used as a paste for the treatment of scabies in 814 people. In 97% of cases, healing was achieved between 3 and 15 days after treatment. We found this to be a very cheap, readily available, effective and acceptable mode of treatment for villagers in developing countries. So far we have not noticed any toxic or adverse reactions. However, more research is needed.

## Boomeree

More millions of illegal migrants are entering our country than ever before in our history over the last 3.5 years from third world countries that have different cleanliness standards, as well as those that picked up scabies in route. I hope the leftist politicians in DC catch them.

Posted On 03/12/2024

---

## Concerned Patriot

Perhaps the illegals can be sent to leftist politician's backyards instead of using space in airports, schools, and other facilities that the American public pay to support. Scabies is treatable, while many other diseases being brought into our nation are not.

Posted On 03/12/2024

---

## jamNjim

It's not just that these are 3rd-world countries. The environment there is conducive to breeding all kinds of blood sucking vermin. I was at a military base in Panama for 3 months when they were going after Noriega. Our showers were disinfected daily to get rid of "crabs". It made no difference. Nothing dries out down there. So, every bacteria and parasite you can imagine THRIVED in the damp environment of the "men's shower". It wasn't a question of if you would get a bacterial or parasitic infection, but WHEN! Going for a walk on a sidewalk was out of the question as there were FLEAS everywhere! The mosquitos were horrendous! We would be doing maneuvers at night and you couldn't have any exposed skin. Their mosquitos are half the size of the ones in N. America. We would cover our faces and hands in mud. They would just go inside our nostrils and bite us there. Same with the ear canals. That was 3 months of living hell!

Posted On 03/12/2024

---

## Learning2021

Exactly! We are so shocked that new diseases are popping up when unvetted illegals are crossing borders.

A curious thing is Ivermectin seems to show positive results combating some cancers. A possible link involving in some cancer cases, parasites?

Posted On 03/12/2024

---

**Guillermou**

Good reference Just. In vitro studies or experimental animal studies examining the parasite-cancer relationship have shown that in addition to parasites that can cause cancer directly, there are also parasites that can indirectly stimulate cancer development through various mechanisms. On the other hand, it is known that the immune response against some parasites can show antitumor activity in the body. Parasitic agents can have both tumor and antitumor effects by regulating the immune response, preventing metastasis and angiogenesis, inhibiting proliferative signals, and regulating inflammatory responses that induce cancer development.

[pubmed.ncbi.nlm.nih.gov/35604195](https://pubmed.ncbi.nlm.nih.gov/35604195) (2022).----- Certain parasitic worms that can live inside the human body can also increase the risk of developing some types of cancer.

Biden letting in millions of illegals isn't helping matters and now there is a measles outbreak in migrant shelters in major cities, what is perplexing is that until Biden was elected president he as well as Obama and Clinton were dead set against unsecured borders and illegal immigration he even said anyone hiring an illegal should be arrested! I think the reason is twofold 1 to spite Trump 2nd he thinks he might be able to finagle a way for the illegals to vote. I was a very liberal democrat for 45 years but not anymore I can't stand with this man or the party they have gone way too far on a lot of issues

## Guillermou

Very true Just, the truth is that the FDA spearheaded a misinformation campaign aimed at fooling the country into believing that ivermectin is just a "horse dewormer," conveniently not mentioning that it is widely used around the world in humans to treat diseases. Similar. As it happens, ivermectin is a powerful remedy for Covid, and it's also cheap, so the establishment had to try to discredit it in order to channel the maximum number of people towards "official" protocols such as the released mRNA "vaccines". under Operation Warp Speed. The FDA even went so far as to threaten doctors who dared to prescribe ivermectin to their patients.

However, now that the dust is settling, the FDA is trying to backtrack, claiming that it never banned doctors from prescribing the low-cost generic drug, but Americans haven't forgotten the truth about what the FDA actually did. . Perhaps most notably, the FDA tweeted during the "pandemic" a mocking message for those taking ivermectin for Covid: The FDA exists to line the pockets of rich and corrupt executives. The FDA also exists to get people hooked on dangerous pharmaceutical drugs: the more expensive the better.

If the FDA had told the truth about ivermectin all along, as former President Donald Trump attempted to do in the early days of the "pandemic," potentially millions of lives could have been saved. Instead, the FDA led people directly to Operation Warp Speed, where they now suffer debilitating side effects. Over the past two years, you may have noticed that the first means of treating Covid outside of vaccines (such as vitamin D, hydroxychloroquine and ivermectin) were routinely rejected by "science" and then by proxy. , the useful idiots of the mainstream media. ## Guillermou

Big Pharma is "literally a criminal syndicate," exclaimed Dr. Pierre Kory in the "Health Ranger Report," revealing "an example of the decades-long war on repurposed, off-patent generic drugs, and ivermectin is simply the latest." " Dr. Kory was an allopathic trained doctor, trained in critical care and lung diseases. Now, Dr. Kory is focusing his private practice on long COVID and vaccine industry syndromes. He said that doctors are "taught" to be arrogant and to think that their allopathic methods are at the "peak of science" and evidence-based medicine, which today is no longer based on evidence, but rather based almost strictly on profit and at the cost of incalculable human slaughter.

[www.brighteon.com/677296f5-1981-486a-8180-3f065d5cba4d](http://www.brighteon.com/677296f5-1981-486a-8180-3f065d5cba4d) (2023).----- Dr. Pierre Kory has been trying to tell the United States and the world that ivermectin is highly effective in preventing COVID-19. On January 5, following the release of the "sixteenth positive and statistically significant trial" reinforcing the effectiveness of the affordable drug, Kory reiterated the same message. Ivermectin is a Nobel Prize-winning drug about which the Journal of Antibiotics wrote in 2017: "Few, if any, medications can compete with ivermectin for its beneficial impact on human health and well-being." Before it was used in animals, to be clear, ivermectin was developed and approved for human use.

It's not just "horse paste," as the US Food and Drug Administration (FDA) stated in an August 21, 2021 tweet denouncing its public use for Covid. [www.medincell.com/wp-content/uploads/2023/01/PR-results-TTG-VF-EN.pdf](http://www.medincell.com/wp-content/uploads/2023/01/PR-results-TTG-VF-EN.pdf) (2023).----- <https://www.uncoverdc.com/2023/02/10/gold-standard-rct-from-gates-funded-company-proves-ivermectin-works-against-covid/> (2023).

## helpothers

A roommate got scabies back in the 80s from buying from a used clothing store. It took around 3 weeks to diagnose it so when that happened we all had to be treated as well as cleaning the house we lived in. They gave us topical DDT 0.0 I remember thinking 'this can't be good to be putting on us'. I was not awake yet health wise but soon after discovered naturopathy etc. Can't imagine it was good for me. Never heard of ivermectin until covid - even tho I'd read many times people in US erroneously believed that they don't get parasites.

....."Made from synthetic chemicals derived from natural chemicals found in chrysanthemums, animal studies suggest pyrethroids cause neurological, immune and reproductive damage while Canadian research suggests pyrethroids may be associated with behavior problems in children."..... When I was in the military, permethrin was handed to us in the form of aerosol cans and we were instructed to spray it on our clothing and allowed to fully dry before wearing the clothing. We were told, under no circumstances, to come in contact with the liquid. If we were to come in contact, we were told to immediately wash it off and report to a medic.

I always asked, "does the dried chemicals in our clothing become a biohazard once our clothes become soaked in sweat and/or get rained on?" I never got an answer back on that!! Needless to say, everyone who knows me, knows I turned around and threw the stuff in the TRASH! Just more government poison designed to make us sterile and dumber. Fast forward 10 years and I was visiting my grandmother. She asked me to spray her cat with tick-n-flea spray. I said OK! She said it was under the sink. I looked and the first can I saw for fleas and thicks I grabbed. I sprayed the cat down with it and within 12 hours the cat died. The cat completely lost its mind (basically went wild).

Slime covered the cat's fur/skin. The cat began weezing and hacking. We couldn't get to the cat because it went under a storage shed outside. After some 8 to 12 hours of tremendous suffering, the cat died. My grandmother was upset. I said it had to be a reaction to the flea-n-tick spray. I checked the can's label and the active ingredient was PERMETHRIN! Then I read, "DO NOT COME IN CONTACT OR USE ON PETS"! I was so upset! I used the wrong spray. What was more disturbing was the fact that the US ARMY had their soldiers putting this same poison on their uniforms to keep ticks off them in the field.

Posted On 03/12/2024

---

**jamNjim**

Fast forward 30 years and we are now offering this poison as a cream to treat scabies! That's absurd! When we have a safe and effective treatment like Ivermectin, why would anyone consider a neurotoxin like Permethrin as a treatment? What about Hydroxychloroquine (HCQ)? I believe they offer HCQ in a topical cream and it probably works on scabies. I have not looked at the wording in many years, but it used to say right on the label that it was a neurotoxin and to NOT COME IN CONTACT! When you read the FDA's description of the chemical, it says it is an insecticide poison that shuts down the nervous system of insects. I'm paraphrasing of course, since I can't remember exactly what I read 30 years ago, but it put the fear of God in me to never touch the stuff, especially after witnessing it kill my grandmother's cat! Yet, the FDA has approved this to treat scabies?? You know what I want to say. Everyone knows what I say at the end of my post.

Posted On 03/12/2024

---

**Learning2021**

Wow! What an account! Good for you for having the forethought to throw the stuff away. I am sorry about the cat though.

## Zoltannovax

So much RESPECT - game-changing advice. One thing the PUFA-pushing, m-RNA modifying, scabies-supporting, and Ivermectin-insulting fish oil salesmen are not going to tell you about is how to get rid of all this bad stuff. My whole life I've been fighting chronic Lyme and fatigue, iron overload,, vitamin D and E deficiencies, long COVID, and scabies. After testing my sputum cortisol levels , my functional health care team has me doing weekly plasmapheresis to get all of inflammatory stuff out of my system. I'm now getting ready to start daily peritoneal dialysis, and my doc is planning to add ivermectin, Vitamin E, methylene blue, and deferoxamine (an iron chelator) to the dialysate mix. They're pretty much guaranteeing to getting rid of any residual ferritin, spike proteins, scabies proteins and mitochondrial free-radical oxidizers that may still be floating around. Hoping to go the extra distance to regain some kind of normalcy again.

## jamNjim

I purchased the tubes of the horse paste form of it and took it every 3 months as a preventive. I used scales that measure in milligrams. I basically measured the dosages in 10 equal dosages, which is slightly under the recommended dosage of 12mg. The tubes of paste come in 6.08gram tubes at 1.87% Ivermectin. The recommended dosage for humans is 12mg/day for 5 days. So, multiply 6.08 by 1,000mg to get 6,080mg. Then multiply 6,080mg by 0.0187 to get the actual amount of ivermectin in the tube to get 114 total milligrams of ivermectin in one tube (horse dosage).

Dividing that into 10 dosages gives you a dosage of 11.4mg each. 12mg is the optimal dosage for treating Covid, but 11.4mg is close enough and that gives you 10 dosages per tube. Using a scale that weighs in milligrams, weigh your dosages to 608mg. I did this 5 straight days every 3 months. So, one tube would last me 6 months. They are about \$12/tube on Amazon: [www.amazon.com/Ivermectin-Paste-Bundles-Sticker-Included/dp/B0CM9Q9WHZ..](https://www.amazon.com/Ivermectin-Paste-Bundles-Sticker-Included/dp/B0CM9Q9WHZ..) When I purchased it, I paid \$10/tube at my local Tractor's Supply. After nearly 4 years and at least 50 covid-19 test, I never tested positive.

## grulla

If you are at a ranch & farm supply store, check the ivermectin horse version of the same brand as the cow version to see if the ingredients are identical. If so, the only other difference would be the tube size, as the dosages are always based the same, as to the weight of the animal; horse or cow. If so, depending on the brand, one should be able to save money with the larger cow version tube or box.

## dso9183

Lyme is no joke. Once it becomes chronic (meaning it was misdiagnosed about ten times), it tends to remain in the body, even after antibiotic treatment. The illness can certainly become dormant, but eradicating the bacteria is a completely different story. Research Plum Island, it's likely at least one bioterror epicenter for the mutated disease.

Posted On 03/12/2024

## bpm4539

Regarding a cure for Lyme: Thomas E. Levy, MD, writes: "A young woman in Pennsylvania was bitten by a pathogen-carrying tick, developed the classical Lyme-associated rash, and proceeded to get very ill over the next seven to ten days. She received several infusions of vitamin C at her house. The first infusion was 100 grams (100,000 mg), and her caregiver reported that she seemed much improved upon the completion of that infusion. Five more infusions of 50 grams each were given over the next two days. By the time that 72 hours had passed, she was completely well, never having a clinical relapse or any chronic Lyme symptoms."
